

YOUR JUGGLING PARTNER FOR PROJECTOR PERFORMANCE

Let the show begin as Jugglor takes your Flash 3/4/5/MX/MX 2004 Projector files and turns them into stand-alone programs that dazzle, delight and deliver an ever so important professional edge. Now there's no need for multiple programs to keep the show going, because Jugglor provides you with all of the tools you need to make the most of your Projector files. Packed with powerful features, Jugglor is a developer's dream and offers special features that Macromedia left out. With Jugglor, you now have the power to customise the Projector file and compress the file even further too. We asked developers what they wanted and created Jugglor to deliver the complete package.

Jugglor can do so much for your Projector files, but what can you do with it? [Click here](#) and check out just some of the possibilities.

Jugglor & all FlashJester products support Flash 3/4/5/MX/MX 2004 & Windows 95/98/ME/NT/2000/XP

UPDATES

Here's what's new in Jugglor 1.1d

- Read and Write to the Windows Registry
- Using the LOADMOVIE command with Jugglor
- Using the LOADVARIABLE command with Jugglor
- Improvements and bug fixes

Here's what's new in Jugglor 1.1c

- Bugs Fixed
- Flash MX support!
- XP support
- Smarter Current Directory
- Improved engine performance
- Dragging improved
- Icons support improved
- Opening files on networks
- Sound card muted in Win2000
- Improved hiding the Taskbar
- Memory error
- Other minor bugs were also fixed.
- Foreground bug
- Better support for JPrintor
- NEW Features
- CTRL F key is now blocked.
- Disables all hot keys and all combinations
- Support the POST command
- Minimize button has now been added to the right click menu (optional)
- Ability to select default Macromedia right click menus

Here's what's new in Jugglor 1.1b

Power to Specify Directory

Use current directory as the root! With our JTools, you can specify the directory in which the Juggled file is run from in order to use it as root directory. This is done using the LOCAL% command. This feature is now in Jugglor and activated by simply selecting the option in the setup.

Minor Bugs Squashed

We have fixed a few minor bugs in Windows 2000 that some of you brought to our attention.

Minimise Button Added

You can now add the option Minimise on the right click menu if you wish.

Here's what's new in Jugglor 1.1

Authenticode Support

FlashJester Jugglor now supports Authenticode. Authenticode is currently the only method of signing code that is used or downloaded from the Internet that proves its authenticity, and this is still a feature simply not possible with a plain Projector file.

Smooth Runnings

This latest version also runs a lot more smoothly on a Windows NT server as well as all other platforms. This is due to the fact that we have rewritten parts of the engine to enhance this.

Password Protection

You are now able to password protect your Juggled files. This can be a useful feature when placing files on the web, which is an open source, but you only want certain people to be able to access the files. Within Jugglor's setup you can also specify the prompts that the user will see when asked to enter the password and also if they enter an incorrect password.

Edit File Info

File version information can now also be edited within Jugglor, meaning the information that is found in the properties dialogue box, and was previously dominated by Macromedia information can now be manipulated to make the Juggled file 100% your own.

Interact with It or Drag It

Previous versions of Jugglor gave you either a choice of interacting with the Projector file, or being able to drag it across the screen. Now you can do either, or both, allowing you even more flexibility with what you can do.

Disappearing Cursor

You can now choose to hide the cursor, hence stopping it from appearing over the top of the Projector file if it is not needed when Juggling a presentation or the like.

Windows 2000 Compatibility

Jugglor now fully supports Windows 2000, so you will have no worries about compatibility what so ever.

FEATURES

Use current directory as the root!

With our JTools, you can specify the directory in which the Juggled file is run from in order to use it as root directory. This is done using the LOCAL% command. This feature is now in Jugglor and activated by simply selecting the option in the setup.

Choose when you wish the Juggled file to expire

Set a date when you want the Juggled file to expire and it will display your custom message when it expires.

Authenticate your Juggled files with Authenticode

When a program arrives in your mail inbox you want to know it's not infected with a virus. Jugglor now fully supports the Microsoft Authenticode signature so you can help guarantee users that receive your Juggled file that it is free of viruses.

Supports Windows 95/98/NT/ME/2000/XP

Jugglor fully supports all versions of Windows, from Windows 95 +.

Jugglor fully supports Flash 3, 4, 5 and MX

Whether you use Flash 3, 4, 5 or MX, you are able to create Juggled files out of the Projector files you make.

Add More functionality with JTools!

If you have JTools™, you can use them with Jugglor to create web links, e-mail links and launch any file with its associated program.

TOTALLY custom window!

You can totally customise the Juggled file window with the options to remove the title bar and borders, changing the size and position of the window. Now, with JShapor you can specify the SHAPE of the Juggled file!

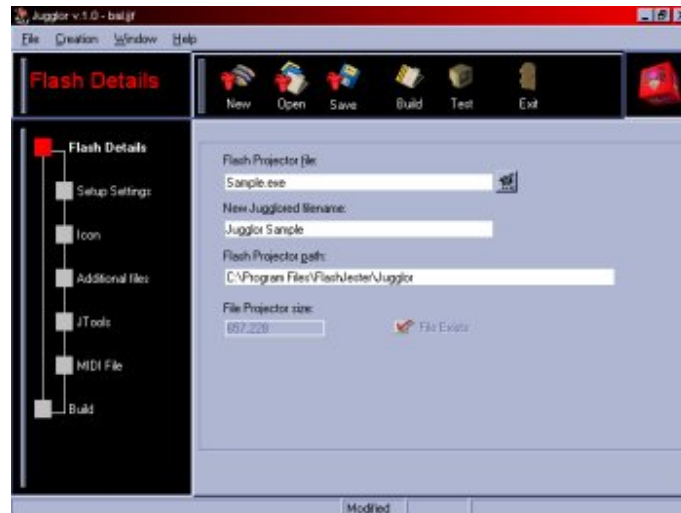

Other great features:

- Eliminates the top menu
- Forces full screen or open in a custom window
- Sets the window to always be on top
- Features option to quit on ESC key press
- Provides no menu option when you right click
- Offers choice to display a right click menu with "Close", "Setup", both or neither
- Changes the icon of the Projector file
- Makes the whole window draggable
- Allows addition of a midi file
- Features on/off interaction option
- Features quick and easy to use interface
- Disables Windows key
- Disables screen saver when Projector file is played
- Changes the modified date of the Projector file
- Support the POST command
- Ability to select default Macromedia right click menus

Screen Shots

Flash Details

The first section, and the screen you will be greeted with when you first start the program, Flash Details allows you to specify which Shockwave Flash Projector file you wish to use in your Juggled file.

When you save the information as a .jff file (Jester Jugglor File), all this information will be loaded back in when you open this file.

Setup Settings

Here are where all the big changes to your Projector file are made. Here you can change options such as sound, interaction, right-click menu, window size, window position and lots more.

Using the sound options, you are able to turn the sound on/off in the screen saver or give the user the option to turn it on/off in the screensavers settings box.

Here you can choose whether or not you want to turn the mouse interaction on or

off, or give the user the choice in the setup box. You can also choose if you want to make the window draggable.

Keyboard Interaction

☐ No interaction at all

☒ Always have interaction

☐ Give the user a choice in setup box

If you turn off the keyboard interaction, users will not be able to use the keys for functions such as play/stop/forward/back. Giving the user the choice will allow them to specify if they want keyboard interaction in the setup box

☒ Exit on ESC key ☐ Hide Cursor

☐ Disable screen-saver

☐ Disable Windows keys

☐ Don't go to foreground on click

Add to right click menu:

☐ "minimize" ☐ "setup"

☐ "close"

Here are just a few more options that a Juggled file includes.

Size and position

Size options

☐ Default ☐ Full-Screen ☐ Maximized ☒ Custom

Caption and border

☒ Normal ☐ No title ☐ No border

Alignment

Left: 0

Top: 0

Screen Center

☒ Maintain Ratio

☒ Allow resize

☐ Always on top

Width: 640

Height: 480

☐ Draggable

OK Cancel

In the Size and Position box, you can select various options on how the Juggled file appears on screen.

Size options: You can select to view the Juggled file in four different modes: Default size (size of the projector file), Full-Screen (forces the projector file full-screen), Maximized (Maximizes the Juggled window) and Custom (Specify the size of the window).

Caption and border: Here you can make the window appear as normal, without the title bar, or borderless and titlebar-less.

Alignment: You can choose to align the window at specific points on screen or define your own custom positions.

Other options: Includes being able to define the exact size (when Custom size option is selected) of the window and the projector files dimensions can be kept the same using the Maintain Ratio feature.

Draggable: Allows you to drag the whole window by clicking anywhere on the Juggled file and dragging it.

Expiration days: 253

Until: 25/12/00

Exp. message

December 2000

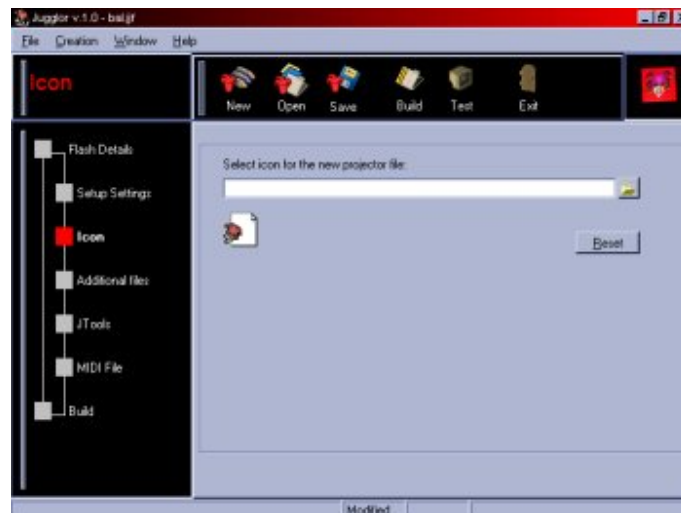

Mon	Tue	Wed	Thu	Fri	Sat	Sun
27	28	29	30	1	2	3
4	5	6	7	8	9	10
11	12	13	14	15	16	17
18	19	20	21	22	23	24
25	26	27	28	29	30	31
1	2	3	4	5	6	7

Today: 17/04/00

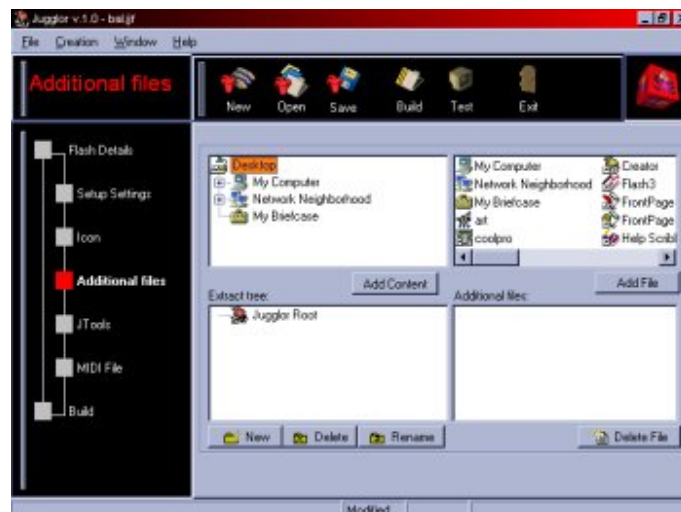

Expiration: Another great feature of Jugglor is that you can set when you wish for the Juggled file to expire. For this, you can set the amount of days the user can use the Juggled file and the message that appears when it does run out.

Icon

Another great feature in Jugglor is that you can change the icon of the projector file to the one of your choice. Jugglor supports both 16 and 256 colour icons and if one is not selected, then the default juggled file icon will be used.

Additional Files

Using the FSCommand Exec, or JStart, you can open programs and files (JStart only) from your hard drive. Another one of Jugglor's features is that it can take any of the files that you launch or use with your projector file and include it inside the finished Juggled file. This results in just ONE .exe with your projector file and any additional files inside. When the Juggled file is run, these files are extracted and can be run.

JTools

The JTools, a collection of tools from the FlashJester range, allow you to add more functionality by restoring web and e-mail links broken in Flash 3 Projector files, starting programs with specific parameters or launching files with their associated programs.

In the JTools section of Jugglor, you can setup all the JTools you have installed easily and quickly. It's as simple as picking the JTool you wish to use, selecting the file/weblink/e-mail link you wish to use with it and then the options. The code needed is then generated and can be pasted into your Flash FSCCommand, Exec's argument box.

Midi File

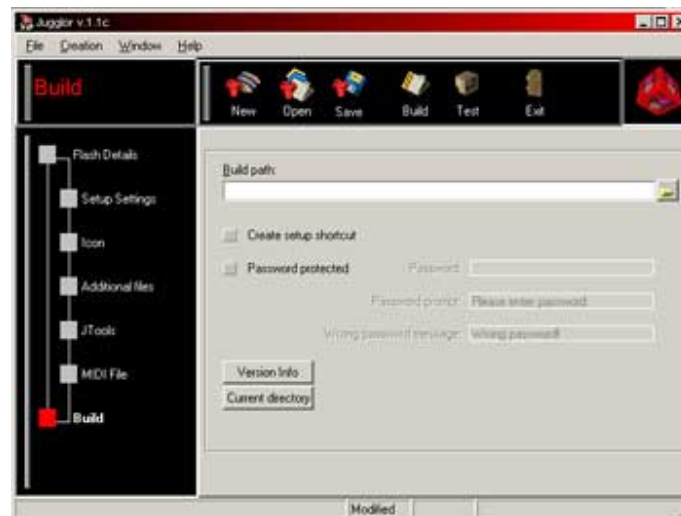

One of the new features in Jugglor is to play a Midi along with your Projector file, an option not included with flash. In this Midi section you will be able to select the midi or choose if you want to disable the midi. You can also choose to loop the midi files as many times as you wish from once, right up to infinite times.

You can also preview the midi file by pressing on the preview buttons.

Build

The part where it all comes together and the Juggled file is built. Here, you can choose where the EXE is built, whether a setup box is created (this is used if you have select to allow the user to change options) and if you want to include the Jester DLL file needed to run the juggled file. Once you have set these options, all that is left is to press the build button and the Juggled file is put together and compressed making it often smaller than the original projector file.

You can now test this either by going to the directory in which the Juggled file was built or by clicking on the Test button on the toolbar.

Some of Jugglor's many options

Some of Jugglor's many options

TESTIMONIALS

What people are saying about Jugglor.

We have always said how great Jugglor is, and we have always gone on about all it's features but you don't have to take our word for it....

Here are just a few examples of the nice things people have been saying about Jugglor.

Floyd Wray

Just a quick note. Though I am otherwise adlepatated at the political craziness of the presidential election, the bright spot in my day was the 2.1 upgrade. FOR FREE.

FJ has been one of my favorite software packages for a couple of years now. You continue to improve the product.

Your affection for your customer base is obvious. Border skins IS A GREAT IDEA!

You guys top the list

Deborah Ostrowski

I just have to compliment you guys! Jugglor is the most logically organized software program I've ever purchased - it's amazing! You guys have put a lot of thought into how the average person would use the program, the wizard-like interface is extremely well planned (I could probably even teach my mother to do this:) I was kind of confused the first couple of hours - I didn't expect the process to be as "automated" as it was, I thought it would be a lot more difficult. But then I followed the advice from the forums and downloaded a couple of examples and instantly the pieces fell into place! (I just don't get the people on the forums - you guys practically beg them to look at the examples - of course they don't and then they keep asking the most stupid questions?!?)

When I ordered Jugglor the other day it was only out of desperation because SWF Studio couldn't do what I needed, I really didn't think I was going to get my money's worth. I now realize that \$400 is a really, really good price for something that does so much! Plus, it has a really big "Gee Whiz" factor involved with it! I absolutely love the buttons (and I don't normally get impressed with that kind of thing). I'm even beginning to like the Jester guy - he kind of creeped me out at first:)

Of course, the most important thing is that I'm 80% finished with my cd and still have 2 days to finish it -YEAH!! I have to tweak my windows a little bit, that's why I purchased ProWeb last night. With the help of Jugglor, my finished cd is going to make me look very impressive:-)

Anyway, thanks again for your quick customer support after my purchase of Jugglor. You and your product have really impressed me (btw, I have never written to a software company because I was impressed with their product -I'm usually the person writing to complain about something!)

John M. Packes Jr.

mostlyliquidproductions
<http://www.mostlyliquid.com/>

Hey thanks for the email. Yea I have to say that I am thrilled that I happed upon your stuff – it was originally to show a flash projector across dual monitors, I didn't expect to get this much with it! This whole additional files in one exe is huge, I cant wait to use it more.

Just to wrap up, I was able to put a flash projector with three FLVs, each about 150 MB, and they run exceptionally well off of CD-ROM. Client is thrilled, and I look like a hero.

Preston Thomas

Pixel Project - South Africa
<http://www.pixelproject.co.za>

I would just like to thank your team for a wonderful product.

Thank you for all the service and support you have been giving as well as the continued upgrades and bug fixes of the program.

As a devnet subscriber to macromedia your flash jester tools have been invaluable with our installations at museums in South Africa.

The tool has helped us achieve explaining our rich history through unique User Interface Physical devices. The response to our exhibits has been overwhelming. Thank you very much for helping us achieve this

Mark Evans

That's cracked it !

I had a feeling it was a simple thing to sort out - but when I've been staring at the code for so long, I can't see the wood for the trees :-)

Thanks very much for sorting the errors of my ways - your help and assistance swift and true and always and much appreciated.

Floyd Wray

IT WORKS. Thanks! I ram my poor, balding head against software, almost daily. The last problem I notified you concerning you fixed it immediately. That you're still operating under such a mandate, to remedy as quickly as possible, puts you at the top of the pack in my books. Please consider conducting customer-service classes for companies like Microsoft.

Danuta Baran-Tait

WOW! – Thanks for the LOCAL% info – it worked a treat and the CD is just excellent, I'm most impressed by your program (even though you guys can't spell on some of your instructions on the front of the program) the coding and software is top notch. You have always replied to my requests for help and it works!!!!!!

Again many thanks – what a great program!!!!

Urami

Flash Fugitive
<http://www.flashfugitive.com/>

For many years now, Jugglor has been an undivided part of our daily work.

As company specializing in developing CD applications , trainings, kiosks, presentations, portfolios, high-end product demos, games etc, it was necessary to overcome Flash limitations and demanded on such competitive market that we deliver highest quality products possible.

Jugglor and other utilities from FlashJester fulfil all the needs. Beside great working experience it provided the most important factor in developing our company - the client satisfaction.

When we could not wish or expect more, the team of FlashJester introduced Jugglor in its second incarnation. It was eye opening experience and ideas for endless new possibilities.

Totally overwhelming new features which widen up our range of services almost immediately.

Better Performance, more options, more customization, simply more professional.

If you can do for living what you love and enjoy you should consider yourself lucky, we know we are.

Jugglor gave us many more possibilities helping directly in allowing continue of our work.

It's crucial that we can offer more, the times where business might not be as good as one wished it is the break that every one needs.

Looking forward to explore other products and keep close eye on FlashJester new solutions.

Your Number 1 Fan and very satisfy customer.

Peter Witham

Internet and Multimedia developer

<http://www.evolutiondata.com>

Using Jugglor enables me to build and deliver products to my clients with a professional appearance and stability. The features within the Jugglor application allow me to move Flash content beyond the standard Flash player and in to the mainstream application Market.

Best part is it's all true! Really appreciate the time you take to get it right.

It's pretty rare amongst companies these days for you to consider the users wishes rather than what fits your development budget.

Vic

Dreamlinestudio.com

<http://www.dreamlinestudio.com>

All of your Flashjester tools have brought our products to a new level. The software is easy to use and is compatible with all our flash files, it's nice to see a flash based company being innovative.

Richman, Janis D.

Baker Robbins & Company

I'll take a look. I purchased jugglor and love it. You guys have great service!!!!!!!

Chris ETLtd

<http://www.etlimited.com>

<http://www.etlimited.com>

Well you will happy to hear that I have finally purchased a FlashJester product, "Jugglor".

It's simply fantastic. Outshines any competition that I've tried and believe me I've tried alot, hence why I kept sending you guys numerous questions regarding your product range. If Jugglor's anything to go by then I'm sure that your Creator will be just as good. Something I aim to purchase shortly.

Ian Watson

Inkey Technologies
<http://www.inkey.co.za>

*Thanks very much for the prompt and informative response.
Will definitely be registering Jugglor.*

infokill

If you look into case studies of the most successful games/promos etc. (depends what execution you are after)... You will find that 9 out of 10 developers have used Jugglor, by Flashjester. Flashjester were one of the earlier third party developers and have fine tuned a user friendly, bug free tool...

Frank Delporte

@Comm
<http://www.atcomm.be>

Hello my friend ;-)

I was not intending to buy the Jugglor, but now I've seen what you can do with it, you just convinced me to pull the visa-card ... :-)

Greetings,

Eric Hunsperger

51 Seconds
<http://www.51seconds.com>

You guys rock. This is the 12th major CD-ROM project that I have used your products on. This time I needed the power of Jugglor and JnetCheck to add the functionality the client was looking for, hit a snag, and you guys set me straight, even sending corrected code! All in a timely fashion that didn't impact deadlines at all. I'll say it again, you guys rock!

Alan Cantes

What a brilliant bit of software by the way, incredibly useful - thanks.

Editor

Ding Bat
<http://www.dingbatmag.com/flashion.htm>

With Jugglor you'll be outfitted for a Flash-based summer circus. Serious clowning only, FlashJester.com offers this stylish Flash Projector editor. It gives you nearly unlimited control over your stand-alone Flashworks. It has all the cool stuff Macromedia left out. With more than a few digital tricks up its sleeve, Jugglor jiggles your Projector file so you can

have it your way. Does everything from dumping unsightly menus to disabling a screensaver to keep it from disrupting the show.

Webmaster

CLC Flash Online

<http://clconline.clc.cc.il.us/mm/flash/thirdparty.htm>

The Best Projector Manipulation Software on the market today. Combines all your files into 1 executable, offers compression, icon replacement, cursor manipulation and more. Ideal unless the total size of your project is over 10-20 MB; every time you launch a juggled file it is copied to your temp drive and decompressed.

Scott MacKenzie

Pro-Consultants

<http://www.pro-consultants.com/>

Thank you, support. Bought the licence, using the product, and dancing in the office after successfully creating something I am very happy with. Great feeling - thanks FJ.

Jugglor is the best of supertool for my Flash applications. It's very very helpful.

Carl R Hansen

American Technical Publishers, Inc

www.americantech.net

Hello FlashJester Support Team, Thanks for the follow up on this question. I am very surprised to see that you actually took my needs into consideration when developing the updated version of Jugglor. There are not many companies that take the time to address issues that their customers have, and I sincerely appreciate your efforts. I'll try to test this new feature you described. This is beneficial to me because I want to imbed my text files (which are small in size) to protect the data, but at the same time keep the JPG images outside of the Juggled file to minimize the file size of the final EXE. Thanks again for taking the time to address this issue. I will not hesitate to express my gratitude to fellow Flash developers so that they can benefit from your excellent product as well.

Klaus Junge

Germany

Hello, I really like JUGGLOR. It makes my flash creations work reliable and solid. My pupils can't manipulate anything...

Mile Smitran

Sometimes I have horrible nightmares, that all that jugglor jester stuff was just a joke and I have to learn director... My god, I feel so guilty by pretending beeing a programmer, not doing the hard way, enjoying the nice flashed way...well,

just kidding.

Andries van der Leij

MetroStation

<http://www.themetrostation.com/>

First of all let me say that your product has really improved our work since we started using it. It really transforms an ordinary flash standalone in a "real" piece of software, a slick little app. It's amazing how much more excited our clients are since we started using it!

Floyd Wray

Realtime Communications

<http://www.bga.com/>

Thanks for your prompt attention. I downloaded the revised update over the weekend. It works perfectly. I'd already concluded Jugglor was a cool program. Now ... I see that it's got first rate support, as well. Thanks.

Rob Fershtman

With Jugglor you'll be outfitted for a Flash-based summer circus. Serious clowning only, FlashJester.com offers this stylish Flash Projector editor. It gives you nearly unlimited control over your stand-alone Flashworks. It has all the cool stuff Macromedia left out. With more than a few digital tricks up its sleeve, Jugglor jiggles your projector file so you can have it your way. Does everything from dumping unsightly menus to disabling a screensaver to keep it from disrupting the show.

Jeremy Merritt - Web Application Developer

High Performance Systems, Inc
<http://www.hps-inc.com/>

Jugglor has enabled us to create an engaging, interactive demo for our software products that looks very professional and offers functionality that would have taken months to develop in-house. Jugglor allowed us stable and professional functionality that would have been buggy and sloppy looking if we had used the stand-alone Flash player. Up to speed time was quick with Jugglor, which was a welcome benefit in the often fast-paced development cycles of the software industry. Thanks Flash Jester!

Chris Edwards

:)Smilie Ltd
www.smilie.com

Jugglor gave us an edge in Flash Multimedia...one that we would not have had on that platform without it. It allowed rapid CD based multimedia development at a professional quality - and wasn't hard to get to grips with! A great package. I can recomend it to anyone that uses flash seriously, and needs the edge with rapid development on CD based multimedia.

Hans W. Rudolph III
